Oct 2026 — Present

PROJECTS & EXPERIENCE

Hotel Booking Analysis | SQL, Python & Excel

· Analysed 119,390 historical bookings using SQL and Python; reconciled joins and monthly totals and created an Excel reporting source.

· Documented a 37.0% cancellation flag rate, including no-shows, and proposed investigation of channel and lead-time mix.

UK Energy Analysis & Forecasting Dissertation | Python

Coventry

· Analysed UK energy consumption from 1970–2024 in Python; corrected unit conversion and reconciled sector totals.

· Explored ARIMA, Random Forest and XGBoost, distinguishing verified historical findings from forecasts needing further validation.

Customer Churn Segmentation | SQL & Python

· Cleaned and segmented 7,043 IBM Telco sample customers in SQL and Python; reconciled counts and compared contract and tenure groups.

· Reported uncertainty and proposed a controlled retention pilot, distinguishing association from causation.
